Same field fabric in eight geographic lower-hemisphere plots

SYNTHETIC DOWN-DIP • field geometry: strike 30°, dip 60° (SE), lineation trend 120°, plunge 60°

Blue = foliation plane trace ■ = foliation pole ● = plunging lineation N↑ E→ lower hemisphere in every panel

Rotation: 1.1e-14°

08 -Z out, -Y east

FIELD • SYNTHETIC DOWN-DIP
Strike 30°
Dip 60° SE
Trend 120°
Plunge 60°

SPECIMEN AXES
Line -Y
Pole -X

On-plane: 9.5e-15°
Rotation: 2.1e-14°

All eight specimen-axis pairs are illustrative alignments. Vectors and rotations use MTEX Python; projection is equal-area (Schmidt).

Input lineation lies on the strike/dip plane; maximum screen-coordinate difference across panels = 2.2e-16.
